AI AUDIO EVALUATOR | AUDIO QUALITY REVIEWER | AI SYSTEMS SPECIALIST

PROFESSIONAL SUMMARY

AI audio evaluator, music-technology product developer and audio-software specialist with formal production training and experience creating commercial tools for Ableton Live, Max for Live, VST3 and Audio Unit. Specialises in critical listening, neural source-separation evaluation, regression testing and cross-platform audio validation. Evaluated more than 60 separation and restoration model options and directed native C++/MLX optimisation work achieving a documented median 1.85× speedup across tested Apple Silicon workloads, reaching 2.5× on MelBand RoFormer while preserving validated output parity. Founder of [Ostin Solo](#) and [VSTOPIA](#); native Italian speaker with full professional English proficiency and professional working Spanish.

CORE EXPERTISE

Audio Quality Evaluation: Critical listening; clarity; intelligibility; background noise; clipping; distortion; pronunciation; phase; transient preservation; source bleed; spectral artefacts; A/B comparison; structured rubrics.

Speech & Transcription Review: Audio-to-transcript verification; STT validation; accents; contextual errors; unclear segments; timestamps; structured error reporting.

Audio Engineering & Music Technology: Signal flow; EQ; noise reduction; normalization; recording; editing; mixing; mastering; Ableton Live; Max/MSP; Max for Live; neural source separation; real-time audio.

AI & Software Systems: Model comparison; acceptance criteria; regression testing; function calling; local models; MLX; Metal/MPS; GGUF; C++; Python; JavaScript/Node.js; JUCE; Docker; APIs; cross-platform macOS and Windows/CUDA validation.

PROFESSIONAL EXPERIENCE

Founder & Product Director — [VSTOPIA](#)

London, United Kingdom | 2023–Present

- Founded and lead a specialist platform for Max for Live devices, audio plug-ins and independent music-technology developers.
- Define catalogue standards and acceptance criteria; evaluate products for originality, reliability, usability and professional relevance.
- Translate concepts into specifications, coordinate external developers and oversee testing, documentation, publishing and customer communication.
- Operate licensing, API and Hetzner-hosted Docker infrastructure while prototyping tools for Max/MSP and developer workflows.

Founder & Audio Software Product Developer — [Ostin Solo](#)

London, United Kingdom | 2018–Present

- Conceive, specify, prototype, test and direct commercial audio-software products for Ableton Live, Max for Live, VST3 and Audio Unit.
- Contribute directly to Max/MSP, JavaScript/Node.js, Python and cross-platform prototyping, while coordinating specialist C++/JUCE development.
- Perform critical listening, model comparison, defect diagnosis, regression testing and release-quality validation across macOS and Windows.
- Commercial portfolio includes [Dynamic Split Module](#), MagicTrackpad-MPE, OpenMultitouch Externals, ASA Tin, Clip Wizard II, [Preview Tuner](#), Pendolo, Ableton Drive, Device Window, Simpler+ and Split Wizard+.
- Collaborated with Grammy-winning, multi-award-winning producer Connor McDonough on [Preview Tuner](#), developing a Max for Live tuning and sample-preview workflow tool based on his production requirements.

Founder, Artistic Director & Experience Designer — Macrowave / Cacao Discoteca / Basement

Avellino and Montemiletto, Italy | 2014–2016

- Directed multidisciplinary electronic-music and multimedia programmes attracting audiences of up to 3,000, including events lasting up to 24 hours.
- Curated performers and coordinated artists, venue teams, technicians and suppliers.
- Contributed to scenography, projection mapping, interactive installations, interior design and venue identity.

SELECTED SOFTWARE & AI PROJECTS

Dynamic Split Module

Commercial Max for Live separation and restoration product covering more than 60 neural model options and configurable multi-stage workflows across MPS, CUDA and CPU.

- Evaluated outputs for bleed, transient loss, phase integrity, spectral artefacts, restoration quality, speed and hardware compatibility.
- Directed C++/MLX optimisation achieving a median 1.85× speedup across tested Apple Silicon workloads and up to 2.5× on MelBand RoFormer, while preserving validated reference behaviour.
- Native MLX C++ inference maintained bit-exact parity with Python MLX and achieved RTF ≈ 0.36 , approximately 2.8× real time, for six-stem BS-RoFormer on an M4 Pro.

Max/MSP Audio Streaming & Voice Recognition

- Real-time Max/MSP or Ableton Live to Node.js audio transport over UDP/TCP.
- Implemented float32 transport, buffering, sample-rate conversion and speech-recognition processing.

Local Voice & Tool-Orchestration System (Work in Progress)

Local assistant (Jarvis-style local orchestration system) translating spoken instructions into structured operations across Ableton Live and development tools.

- Uses low-latency STT including Moonshine with contextual correction; evaluates FunctionGemma and compact function-calling models; supports sequential and parallel tool execution with automated speech-to-command validation.

AUDIOENCE

Product direction for a real-time remote-collaboration VST3/AU plug-in supporting audio, MIDI and synchronised musical interaction via WebRTC, Ableton Link, buffering and synchronisation.

EDUCATION

Music Production — SAE Institute | 2019–2020 — Professional music production, recording, editing, mixing, mastering, sound design and synthesis.

Spanish Language Studies — Valencia, Spain | 2022 — Formal study and linguistic immersion.

Electronic Music & Musicianship — Italian Conservatory | c. 2004–2009 — Theory, solfeggio, harmony, analysis, electronic music and synthesis.

Scientific High School Diploma — Liceo Scientifico | Italy | c. 2007–2012 — Mathematics, physics, natural sciences and humanities.

LANGUAGES

Italian: Native | English: Full professional proficiency; IELTS certified | Spanish: Professional working proficiency

TECHNICAL SETUP, RECOGNITION & ADDITIONAL INFORMATION

- Equipped for remote audio-evaluation work with Beyerdynamic DT 990 Pro headphones, Genelec M040 speakers, Universal Audio Apollo Quad, Lewitt LCT 640 microphone and a dedicated listening environment; NVIDIA RTX 3080 Ti and RTX 3070 systems plus Apple M4 Pro (48 GB) and Intel Mac systems for Metal, MPS, MLX and GGUF local-model evaluation.
- Products covered by specialist industry publications including [Sound On Sound](#) and [Gearnews](#); [Pendolo](#) also covered by Gearnews.

- Additional technical skills: Blender, Arduino prototyping, Unity, projection mapping and interactive audiovisual installations.
- Based in London with the right to live and work in the United Kingdom.
